

Hydraulic shackle lifting arrangement

The Shackles can be remotely released by the operator

Hydraulic shackle lifting arrangement with underwater cameras and lights for precision placing of rocks, etc. on the seabed. The arrangement consists of two triangular lifting frames with different sizes.

On the lower frame there are three cameras and lights and also the three hydraulic 55Te ROV shackles. Made for water depths from 2-20m. The lifting arrangement is made in accordance with standard lifting standards.
